Define- Industrial Chiller

The industrial chiller is the type of the refrigeration system that is used for the providing the cooling of some particular space or place that is used by the several components for storing or cooling purposes.

There working is similar to that of the household refrigerator but the only difference is that, these chillers are quite big in size and also used for serving the industries or the place where large quantity of product is to be stored

Engg Temp is the foremost [Industrial Air Chiller Manufacturer](#) in India and the [Industrial Water Chiller Supplier](#) and exporter in India.
